

Leafless Bird of Paradise (Strelitzia juncea)

Strelitzia juncea is a rare plant in the Bird of Paradise family. It has similar flowers to the Orange Bird of Paradise (*Strelitzia reginae*), but foliage is more narrow and more like grass. Other forms usually have paddle shaped foliage, but *Strelitzia juncea* is the exception with this very unique foliage. *Strelitzia juncea* is also slower growing than other varieties, but would make a very good landscaping plant none the less. The needle-like foliage is very striking in the garden, and *Strelitzia juncea* can be a very drought hardy plant once it has established itself in your garden. *Strelitzia juncea* grows approximate 1-2m in height and width, and will take 3-4 years to flower. It is very long lived and as a bold accent plant will look fantastic amongst other tropical plants, rock gardens or formal gardens.

This plant suits most gardens in Australia, as it not only tolerates drought well, it is also frost hardy. This plant is suitable for gardens which may experience light frost for short periods of time. *Strelitzia juncea* is best grown in full sun for best flowering performance, but could be grown in part shade. Part shade positions will be better for nicer, greener foliage. Keep Bird of Paradise out of draughty positions as damage to the foliage is sometimes incurred due to stormy winds.

Propagation is from seed, if you can get your hands on some. Keep your seeds covered up to protect them from mice, birds and other preying wildlife!

Common names: Leafless Bird of Paradise, Narrow Leaved Bird of Paradise, Needle Leaved Bird of Paradise, Narrow Leaf Bird of Paradise.

Additional General Growing Notes:

ON ARRIVAL:

Soaking: When you receive your plants, unwrap them carefully, and give their roots a good soak in seaweed solution or water for a couple of hours. Some plants, mainly succulents and plants with fleshy roots such as *Dracaena draco*, should not be soaked for more than a few minutes to avoid rot. You can pour left-over seaweed solution on the plant after you have potted it up.

Pot size: Choose the right pot size for your plants. Don't choose a huge pot in the hope the plant will grow faster, as it won't! Most small plants will grow well in 75mm or 100mm pots, medium plants will often be suited to 125mm to 140mm pots, and large plants will need bigger pots to suit.

Leafless Bird of Paradise (Strelitzia juncea)

Potting mix: Use a well draining potting mix which is of good quality. You can mix your own, or purchase a pre-mix from garden centres. Cacti, succulents and cycads will appreciate a potting mix which is very well draining. You can add some sand, perlite or vermiculite to improve drainage, or purchase a specific cacti & succulent potting mix. Some plants, such as Gardenia & Azalea will need specific potting mix as they prefer acidic soil, and Aroids such as Orchids and Philodendron like to grow in special orchid mix.

Fertilising: All plants appreciate good, nutrient-rich soil, and will grow well with a regular application of the right fertiliser. It is best to find a fertiliser specifically designed for the type of plant you are growing. We generally use a slow release fertiliser (such as Osmocote) for most plants, and also add lots of organic matter to the soil. Plants thrive with regular application of blood & bone, Dynamic Lifter or other organic fertiliser, which adds to your soil. You can also add slow release regularly to really kick them on. Some foliage plants will love a regular feed with liquid fertiliser, as it is both absorbed through the foliage, and the soil. Cacti and succulents need special care when it comes to fertilisers as they can be very sensitive. Use a diluted form of liquid fertiliser or organic fertiliser only.

Watering: Make sure you water in your plants really, really well! You need to get air bubbles out of the soil, as roots die when they come into contact with air bubbles. This might cause them to die back, prohibits them from thriving and might even cause death. It is one of the most important things to do when re-potting plants! Once watered in, water your plants regularly. The rate would depend on the pot size. Most leafy plants will give you an indication of when they need watering, but it's best to not let it get that far. You can stick your finger in the soil to check, the soil should feel moist to your second knuckle. If it feels dry, water. It is best to water when the plant needs it, and water well, rather than watering small amounts. This will stop the roots from developing properly. Make sure you don't overwater to avoid root rot and cloggy soil. Cacti and succulents don't need as much water. Most plants need less water during winter. Pots will need more watering than plants in the ground.

Position: It's best to keep your plants in a protected position away from heat, sun, draughts etc. until you see some new growth, such as a new shoot or leaf. Once they have accustomed to their new climate and environment, you can start adjusting them to their final position in the garden, or pot. Slowly adjust them to full sun, and keep them protected from frost and wind for as long as possible. Some plants, such as Dracaena draco, Cycads, Cacti and most Succulents can be placed in a sunny position right from when they are young. Growing plants up in pots until they're nice and strong will ensure a good start in the garden, so we recommend growing them in pots for a while first. If you are planting them out, 'tree guard' are a good thing, and so are structures around the plant with shade cloth. Make sure you mulch well when you plant them in the garden – mulch conditions your soil, protects roots and saves water!

Research

As there are many aspects to growing plants, such as climate, position and care, we recommend you read as much as possible about your plant. The internet is a great source of information, as our online forums and books. Some plants may have special needs in your climate, and our guide is only provided as general information and reflects our own experience. We do not accept any responsibility for consequences of the usage of the information provided in this guide.
