

Bird of Paradise (*Strelitzia reginae*)

The Bird of Paradise has a uniquely shaped flower which resembles a bird's head. Flowers are orange and blue and flower most of the year. The warmer the climate, the more they bloom. It has paddle shaped leathery leaves that are approx 20cm long and 15cm wide. It forms clumps over a meter wide, up to 2 meters high.

Bird of Paradise should be planted in rich acidic soil. If your soil is not rich, add rotted manure or time release fertilizer to the hole when planting. Fertilize plants monthly. Give potted BOP's a liquid fertilizer every 2 weeks. Crowd pots to achieve the most blooms. Plants should be planted in bright sun for the best flowers, in shade for the best looking foliage. A spot where the sun is filtered during the hottest parts of the day would be ideal; this way you get the beautiful green foliage and a decent amount of flowers. Water frequently during hot times, less in winter. Don't sog the soil if planted in a pot. Bird of Paradise is easily damaged by frost & freezing temperatures, but would recover if the ground doesn't freeze. Bird of Paradise provides bulk and mass to your garden and can be used as a small scrub. They look great with lower growing annuals or ground covers.

Use in shrub borders and in planting islands and containers. Makes a showy and non-messy plant next to the pool, a beautiful potted specimen for homes & offices and is widely used in flower arrangements/cut flowers.

Propagation: Strelitzia are propagated by division or by seed. Seed is very erratic and may take up to 2 years to germinate. The plant is ornithophilous, which requires nectar-eating birds to pollinate its flowers.

Common names: Bird of Paradise, Crane Flower.

Additional General Growing Notes:

ON ARRIVAL:

Soaking: When you receive your plants, unwrap them carefully, and give their roots a good soak in seaweed solution or water for a couple of hours. Some plants, mainly succulents and plants with fleshy roots such as *Dracaena draco*, should not be soaked for more than a few minutes to avoid rot. You can pour left-over seaweed solution on the plant after you have potted it up.

Pot size: Choose the right pot size for your plants. Don't choose a huge pot in the hope the plant will grow faster, as it won't! Most small plants will grow well in 75mm or 100mm pots, medium plants will often be suited to 125mm to 140mm pots, and large plants will need bigger pots to suit.

Bird of Paradise (*Strelitzia reginae*)

Potting mix: Use a well draining potting mix which is of good quality. You can mix your own, or purchase a pre-mix from garden centres. Cacti, succulents and cycads will appreciate a potting mix which is very well draining. You can add some sand, perlite or vermiculite to improve drainage, or purchase a specific cacti & succulent potting mix. Some plants, such as Gardenia & Azalea will need specific potting mix as they prefer acidic soil, and Aroids such as Orchids and Philodendron like to grow in special orchid mix.

Fertilising: All plants appreciate good, nutrient-rich soil, and will grow well with a regular application of the right fertiliser. It is best to find a fertiliser specifically designed for the type of plant you are growing. We generally use a slow release fertiliser (such as Osmocote) for most plants, and also add lots of organic matter to the soil. Plants thrive with regular application of blood & bone, Dynamic Lifter or other organic fertiliser, which adds to your soil. You can also add slow release regularly to really kick them on. Some foliage plants will love a regular feed with liquid fertiliser, as it is both absorbed through the foliage, and the soil. Cacti and succulents need special care when it comes to fertilisers as they can be very sensitive. Use a diluted form of liquid fertiliser or organic fertiliser only.

Watering: Make sure you water in your plants really, really well! You need to get air bubbles out of the soil, as roots die when they come into contact with air bubbles. This might cause them to die back, prohibits them from thriving and might even cause death. It is one of the most important things to do when re-potting plants! Once watered in, water your plants regularly. The rate would depend on the pot size. Most leafy plants will give you an indication of when they need watering, but it's best to not let it get that far. You can stick your finger in the soil to check, the soil should feel moist to your second knuckle. If it feels dry, water. It is best to water when the plant needs it, and water well, rather than watering small amounts. This will stop the roots from developing properly. Make sure you don't overwater to avoid root rot and cloggy soil. Cacti and succulents don't need as much water. Most plants need less water during winter. Pots will need more watering than plants in the ground.

Position: It's best to keep your plants in a protected position away from heat, sun, draughts etc. until you see some new growth, such as a new shoot or leaf. Once they have accustomed to their new climate and environment, you can start adjusting them to their final position in the garden, or pot. Slowly adjust them to full sun, and keep them protected from frost and wind for as long as possible. Some plants, such as *Dracaena draco*, Cycads, Cacti and most Succulents can be placed in a sunny position right from when they are young. Growing plants up in pots until they're nice and strong will ensure a good start in the garden, so we recommend growing them in pots for a while first. If you are planting them out, 'tree guard' are a good thing, and so are structures around the plant with shade cloth. Make sure you mulch well when you plant them in the garden – mulch conditions your soil, protects roots and saves water!

Research

As there are many aspects to growing plants, such as climate, position and care, we recommend you read as much as possible about your plant. The internet is a great source of information, as our online forums and books. Some plants may have special needs in your climate, and our guide is only provided as general information and reflects our own experience. We do not accept any responsibility for consequences of the usage of the information provided in this guide.
